- Loan, Credit, Insurance and Mortgage

Web Push Notifications presents a refreshing method of communicating with both desktop and mobile users. User Engagement for businesses in the Banking and Financial Sector kicks in typically after lead acquisition. It is only once a user has filled a form, submitted a request does the process of lead user engagement start. The degree of personalisation of this engagement depends upon the tools used and extent of sophistication being used.

Web Push Notifications

Web Push Notifications work seamlessly across Desktop (All OS) and Mobile (Android only). Supported by all the leading browsers including Chrome, Firefox and Safari, the adoption of web push technology has been rapid.

Some Brilliant Use Cases

Here are some of the popular use cases that are being explored by businesses in the banking and financial sector:

1 Content Marketing

Banks, Aggregators, insurance Providers are increasingly moving towards content marketing as a lead generation strategy. Content marketing involves educating the user about the problem statement and then gradually pulling them through the education funnel. Content marketing involves frequent user communication and driving traffic to blog. Marketers are increasingly inclining towards web push as a communication channel over email. With response rates upto 25%, user communication is for more impactful

It's a known fact that over 95% users leave the website without completing any transaction or registering for a service. Marketers have heavily relied on channels like Display Network Retargeting, Email (only if user has provided email id) to bring these users back. Both of these channels have their own limitation - high cost of conversion. Web push notifications

Performance of Web Push Notifications stands out when used for retargeting users and bringing them back to the website. Not only the CTR's are better but the conversion rates also stand out.

3 Announcement: Offers and Alerts

Web push notifications are also being increasingly used for direct end user communication such as sale announcements, new product launches, product updates and upgrades. The efficacy of the communication and the response rates obviously improve with targeting and segmentation.

Businesses in the Banking and Financial Sector thrive on validating customer intent and basis the customer persona, further cross sell them other products. For instance, users using credit cards often get communication for insurance and tax saving investments. Cross Selling is primarily executed via Email and Call Center - both the channels are plagued by low response rates. Web Push Notifications can be used effectively to target these customers and highlight specific products.

5 Transactional Communication

Web Push can also be used for user feedback, sending reminders and alerts and pushing out transactional communication. Payment reminders, upgrade alerts can also be pushed to users using web push notifications.
